

Institutional General Education Goals

1. Construct a broad foundation for the student's specialized course of study
2. Develop the student's ability to read, observe and listen with comprehension; enhance the student's skills in communicating effectively
3. Expand the student's capacity for critical analysis and problem solving
4. Assist the student in understanding and respecting diversity in people, beliefs and societies
5. Develop the student's ability to appreciate and function in the human and natural environment

Content Area Designation and Goals

Analytical / quantitative thought (A)

- systems of logic
- mathematical sciences
- development through deductive / inductive process

Goals

1. Prepare students to critically analyze and solve problems using quantitative, geometric, or logical models.
2. Form inferences using logical systems and mathematical information
3. Communicate these in writing
4. Give appropriate multiple representations (symbolical, visual, graphical, numerical or verbal) of logical or mathematical information

Humanities courses (H)

- courses concentrate on the expression, analysis and interpretation of ideas and the aesthetics or values that have formed and informed individuals and societies
- and emphasize diversity in the expression of human ideas and aesthetic or cultural values.

Goals

1. prepare students to critically analyze the relationships of aesthetics, ideas, or cultural values to historic and contemporary cultures
2. develop an understanding of how ideas, events, arts or texts shape diverse individual identities
3. demonstrate their understanding through written work that provides them the opportunity to enhance their writing skills

Contemporary International Culture (L)

- include the equivalent of at least one semester credit hour of laboratory experience aimed at interpreting scientific hypotheses and emphasize scientific inquiry and experimental methodology

Goals

1. prepare students to critically analyze scientific problems, formulate hypotheses, conduct appropriate experiments, and interpret results
2. solve problems using scientific inquiry and experimental methodology; communicate procedures, results and conclusions to others
3. demonstrate their understanding through written work appropriate to the discipline that provides them the opportunity to enhance their writing skills.

Natural Science (N)

- courses feature the systematic study of natural processes, and the mechanisms and consequences of human intervention in those processes; and place primary emphasis on the subject matter of one or more basic physical or biological sciences in a broadly integrative fashion

Goals

1. prepare students to understand the scientific inquiry process;
2. critically analyze the physical world using the language and concepts of science
3. use the methodologies and models of science to select, define, solve, and evaluate problems in biological and physical sciences
4. evaluate evidence, interpretations, results, and solutions related to the physical and biological sciences
5. evaluate evidence, interpretations, results, and solutions related to the physical and biological sciences
6. understand the consequences of human intervention in natural processes and mechanisms
7. demonstrate their understanding through written work appropriate to the discipline that provides them the opportunity to enhance their writing skills

Scientific Investigation (L)

- courses include the equivalent of at least one semester credit hour of laboratory experience aimed at interpreting scientific hypotheses and emphasize scientific inquiry and experimental methodology.

Goals

1. are to prepare students to critically analyze scientific problems, formulate hypotheses, conduct appropriate experiments, and interpret results
2. solve problems using scientific inquiry and experimental methodology
3. communicate procedures, results and conclusions to others
4. demonstrate their understanding through written work appropriate to the discipline that provides them the opportunity to enhance their writing skills

Social and Behavioral Sciences (S)

- courses propose theoretical constructs to explain human behavior and society in social and/or physical environments; and are based on empirical observation of human behavior rather than the study of aesthetics, ideas or cultural values

Goals

1. prepare students to critically analyze generalizations about society and explore theoretical structures
2. understand the role of empirical observation in the social and behavioral structures
3. demonstrate their understanding through written work that provides them the opportunity to enhance their writing skills

Diversity (D)

- emphasize one or more socially constructed groups (e.g. racial, ethnic, religious, gender, age, disability, sexual orientation) in the United States

Goals

1. prepare students to critically analyze historical and contemporary examples of socially constructed groups in American society or culture and the distribution of political, economic, and/or cultural benefits and opportunities afforded to these groups
2. to understand how these groups relate to the student's academic discipline and American culture
3. demonstrate their understanding through written work that provides them the opportunity to enhance their writing skills
